

Checking

- Niall had 22.5 kg of rice. He divided the rice equally into five containers.
 - Estimate the mass of rice in each container. Explain your thinking.
 - Calculate the mass of rice in each container. Show your work.

Practising

- A line of nine toonies is 26.1 cm. How wide is one toonie?

Choose ② from
4, 5, 7, 9, 14

- Calculate. Show your work. Choose ②.
 - $5.2 \div 4$
 - $17.46 \div 6$
 - $4.92 \div 3$
 - $2.864 \div 8$

- Amy divided 0.456 kg of barbecued pork into four equal portions. What is the mass of each portion? Show your work.
- Renée had 40.984 kg of clay to work with. She divided it equally into four containers.
 - Calculate the mass of clay in each container. Show your work.
 - Estimate to see whether your answer for part a) is reasonable.
 - Calculate the mass of the clay in each container another way. Explain your thinking.
- Each quotient is missing a decimal point. ~~Describe where the decimal point should be placed. Explain one answer.~~ Put the decimal in the correct spot.
 - $17.25 \div 5 = 345$
 - $90.72 \div 8 = 1134$
 - $25.48 \div 1 = 2548$
 - $277.2 \div 9 = 308$
